Computational Complexity

Predicting Processing Load

Distribution and Semantic Complexity

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● のへぐ

Inherent complexity

Inherent complexity of the problem (e.g., time and memory)

Inherent complexity

Inherent complexity of the problem (e.g., time and memory)

> and not the particular algorithmic implementation.

E.g. in terms of Chomsky's Hierarchy

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 - のへで

Or (in)tractability Border

Various semantic problems

- Inferential meaning
 - \hookrightarrow complexity of reasoning (satisfiability)
- Referential meaning
 - \hookrightarrow complexity of verification (model-checking)

Quantifiers

- 1. All poets have low self-esteem.
- 2. Some dean danced nude on the table.
- 3. At least 3 grad students prepared presentations.
- 4. An even number of the students saw a ghost.
- 5. Most of the students think they are smart.
- 6. Less than half of the students received good marks.
- 7. Many of the soldiers have not eaten for several days.

◆□▶ ◆□▶ ▲□▶ ▲□▶ □ のQ@

8. A few of the conservatives complained about taxes.

... and Chomsky's Hierarchy

All As are B.

More than 2 As are B.

... and Chomsky's Hierarchy

... and Chomsky's Hierarchy

van Benthem, Essays in logical semantics, 1986

Mostowski, Computational semantics for monadic quantifiers, 1998

A simple study

More than half of the cars are yellow.

・ロト ・四ト ・ヨト ・ヨト

ъ

Verification times can be predicted by complexity

Szymanik & Zajenkowski, Comprehension of simple quantifiers. Empirical evaluation of a computational model, Cognitive Science, 2010

Neurobehavioral prediction wrt working memory is satisfied

Differences in brain activity.

 Only proportional quantifiers activate working-memory capacity: recruit right dorsolateral prefrontal cortex.

McMillan et al., Neural basis for generalized quantifiers comprehension, Neuropsychologia, 2005

Szymanik, A Note on some neuroimaging study of natural language quantifiers comprehension, Neuropsychologia, 2007

Computational Complexity

Predicting Processing Load

Distribution and Semantic Complexity

Distribution is skewed towards quantifiers of low complexity

Thorne & Szymanik. Generalized Quantifier Distribution and Semantic Complexity, 2013.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ ─臣 ─のへで

Szymanik, Computational complexity of polyadic lifts of generalized quantifiers in natural language. Linguistics & Philosophy 2010.

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ のQで

Comprehension and verification are influenced by complexity

- 1. Draw and verify:
 - All/Most of the dots are directly connected to each other.

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ 臣 のへぐ

Comprehension and verification are influenced by complexity

- 1. Draw and verify:
 - All/Most of the dots are directly connected to each other.
- 2. In line with complexity:
 - Fewer strong pictures for 'most'
 - Better performance on complete graphs for 'All'-condition

Schlotterbeck & Bott, Easy solutions for a hard problem? The computational complexity of reciprocals with quantificational antecedents, Proc. of the Logic & Cognition Workshop at ESSLLI 2012.

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

Few Intractable Expressions in NL

Distribution in corpora is again skewed towards tractable constructions.

Thorne & Szymanik, Generalized Quantifier Distribution and Semantic Complexity, 2013

▲□▶ ▲□▶ ▲□▶ ▲□▶ = 三 のへで

Beyond everyday language

Some expressions may be even too hard to appear in NL.

E.g, some collective quantifiers can be crazy complex!

Kontinen & Szymanik, A remark on collective quantification, Journal of Logic, Language and Information, 2008

Mostowski & Szymanik, Semantic bounds for everyday language, Semiotica 2008

Summing up

Ristad's Thesis

Complexity as a test of methodological plausibility of linguistic theories.
